

MiniStore mkII Mini DMX recorder-player

The Mini Store is a reduced version of the showSTORE. It allows to record in real time a DMX show from any lighting desk with up to 512 channels and recording time depending of the selected frame rate.

The new 2.0 software version can record up to 512 channels, by using a delta recording. Only changes are recorded. The more changes (fades and channels) you have, the more memory it consumes.

A show with 12 moving lights with constant fading on 16-bit pan/tilt, CMY and dimmer will record up to 6 minutes (@ 40fps).

A show with just a few changes might record up to hours.

The dipswitches 1 and 2 on the back of the unit now give the base frame rate. By limiting the framerate you can increase the length of the recording, but it might have an impact on slow fades.

The dip switch setting allows the following operating modes:

- Record and playback by keyboard
- Play only
- Autoplay by Power on
- Start by contact closure (using the DMX input plug)

Applications:

- Exhibitions
- Museum
- Light Rental
- Shops

Specifications:

- Size: 200x150x44mm
- Weight: 1,4Kg
- Power Supply: 115V/230V selectable
- Power Consumption: 3VA
- Inputs: 5-pin XLR male or 3-pin XLR male
- Contact closure on DMX input
- Outputs: 5-pin XLR female or 3-pin XLR female
- Keyboard functions: REC/START/LOOP/STOP

Frame Rate
40 fps
33 fps
25 fps
12 fps

Available models:

- miniSTORE/3 with 3-pins XLR
- miniSTORE/5 with 5-pins XLR
